

# ***ELITE*<sup>™</sup> Series Insert Spreaders**

**Designed to Reduce Maintenance and Increase Productivity**

**For Utility Vehicles and Pick-Up Trucks**

# ELITE™ Series Insert Spreaders

## The Meyer Legacy Lives On

For more than 90 years, Meyer has provided the most innovative and best-performing ice control equipment in North America. Our new line of Meyer **ELITE** Insert Spreaders for utility vehicles and pick-up trucks embodies this long tradition of innovation and high performance.

**ELITE-3/4**

## Spend Time On The Job, Not Maintaining Equipment

The less time spent adjusting or cleaning is more time spent on the job. And because we use maintenance-free materials in the construction of our spreaders, they are lighter and more resistant to harsh weather and damaging chemicals.

- The hopper is lighter, stronger and more stable. It has ZERO items that need to be maintained.
- The poly idler is maintenance free and carries a 10-year warranty. Poly engine shrouds and covers protect the drive mechanicals from damaging elements.
- Full-length, rubber-chain shields eliminate leaking materials.
- The spinner assembly is constructed of maintenance-free poly for a long life.

## Safer and Easier To Use

Our patented, inverted-V conveyer shield\* is now tapered on **ELITE-6/8** models. This design moves the center of gravity to the center of the truck's chassis and makes the vehicle more stable on slippery roads. Operators will appreciate other new design features that will make their jobs easier.

- The addition of a tensioner to the drive chain keeps consistent tension on the spring, eliminating frequent stops to make manual adjustments.
- New sectional top screens are easier to lift and remove, and recessed edges protect from damage.
- The spinner chute, available in four height options, has a spring-loaded shaft connector that always keeps the spinner engaged.
- Formed handles and spring pins make the assembly easy to attach or remove in just a few seconds.

\* Inverted-V not available on **ELITE-3/4** models.

Tapered inverted-V not available on **ELITE-8/10** models.

# Low Maintenance and Easy to Use

## Designed to Outperform the Competition

We're proud to introduce our NEW line of insert spreaders. We've improved the line-up to make them low maintenance, easier to use, and reliable as ever. All Meyer **ELITES** are built in the United States and meet the highest quality standards. Each new component was tested for more than 300 cumulative hours to ensure consistent performance, every time you use the product.

# Consistent and Reliable Spreading Performance

From the front of the hopper, to the spinner and chute assemblies, **ELITE™** spreaders are designed to provide superior spreading performance.

## Hopper

Lighter hopper available in carbon steel or maintenance-free stainless steel.

## Material Delivery

Design improvements to the inverted-V centers the material weight for more stability and safety while driving on winter roads. Available on **ELITE-6/8** only.

## No Maintenance Hopper

The redesigned hopper is lighter, stronger and more stable. It includes new features like formed floor supports, body jacks with integrated tie downs, and a universal longitudinal design for interchangeability of drives across the **ELITE** line.

## Consistent Material Delivery

Conveyer options include drag chain or belt-over-chain that delivers a consistent output of material, while not leaking into the hopper.

## Spinner Chute

Forward handles and pins for easy on/off.

## Wired Controller or Wireless Controller

Control the engine speed using touchpad buttons.

## Exclusive Spinner System

A new, lighter poly spinner makes attaching and detaching a breeze across the **ELITE** line. The innovative poly disc has a coned center hub that is better balanced and prevents material build-up in the spinner.

## Wireless Control\*

The wireless controller remotely allows the gas engine speed to throttle up, down and choke as well as turn on and off.

## Gas Springs\*\*

The gas springs hold the engine shroud in the open position during refueling and maintenance.

## Side Extensions

Optional side extensions quickly increase hopper capacity.

## Built with Safety in Mind

**ELITE** spreaders are CE certified. Safety features include a material top screen, enclosure for front bearing, drive chain guard, integrated fork-lift pockets, a work light, brake light, and poly engine shroud with integrated gas springs.

## Performance Enhancing Optional Equipment

To make the Meyer **ELITE** spreaders more versatile, the following optional equipment is available: tarp kit, side extensions, vibrator kit and tie-down kit.

\* Wireless controls are available on gas models only and are a standard feature for gas models.

\*\*Available on gas engine models only.
