## **Meyer Products Introduces Telescoping Power Box™ Plow** *The only box plow that will go to any length to get the snow*

CLEVELAND (April 11, 2016) – Once again Meyer Products shows they'll go to any length to help their customers take on the snow. Meyer's versatile new Power Box Plow, which telescopes from 8' to 12' using in-cab controls, saves time and can be attached to almost any machine. Its patented multipurpose design dramatically increases the functionality and maneuverability of containment plows while keeping the benefits of high performance power units.

Meyer's Power Box Plow has adjustable left and right hydraulic wings that move to the operator's desired length, increasing maneuverability and easily clearing narrow areas or open lots and negotiating obstacles. It attaches to skid steers, tractors and compact wheel loaders with a convenient free-floating mount, and flips over for more effective push and back drag of snow, mud, manure and more.

Plastic-on-steel guides mean the Power Box Plow needs no greasing or maintenance, while its high density steel construction withstands almost any punishment. The Power Box comes standard with a rubber cutting edge for quieter operation on multiple surfaces and free floats 20° to follow the contour of uneven pavement and clear more snow.

Meyer's revolutionary Power Box, which can move a wide variety of free-flowing materials, is one of the most adaptable plows on the market and its collapsed mode means safer transport.
